

## THE MOST GENTLE WAY TO ACHIEVE A NATURAL BRONZED LOOK

The most gentle and caring way to achieve a natural bronzed look is with **Max Factor Natural Minerals Bronzer**. After the success of **Max Factor Natural Minerals Foundation**, women have been searching for a mineral bronzer to complete the radiant, natural look provided by mineral makeup. **Max Factor Natural Minerals Bronzer** provides a natural and buildable bronzing experience, while gently smoothing over imperfections.

**Max Factor Natural Minerals Bronzer** is a new advanced mineral bronzer that contains the softest mineral on earth to give you a natural, bronzed glow. Boasting many of the same ingredients as **Max Factor's** exceptional **Natural Minerals Foundation**, the ultra-fine powder is five times finer than competitive products with ingredients chosen for their natural and caring properties. The advantage of **Max Factor Natural Minerals Bronzer** is that the coverage is buildable – you can personally control your sun-kissed glow.

The 100% professional natural brush is long and tapered, and the specifically designed concave sifter ensures expert control for both dosing and application. Ideal for women with sensitive skin, **Max Factor Natural Minerals Bronzer** provides benefits to the skin whilst naturally helping protect against impurities.

**Max Factor Natural Minerals Bronzer** is easily applied in three simple steps.

1. Shake the bronzer into the shifter
2. Dip the brush lightly into the sifter
3. Sweep the bronzer across the face using gentle stroking motions

**Max Factor Natural Minerals Bronzer** is available in August 2009.

Available in one shade – Sun Powder – as coverage is buildable, it is suitable for fair, medium and dark skin tones.
